Machine learning and software engineer with more than ten years of experience in academic research and open-source software development. Confident in directing teammates and students as a project manager and instructor. Recipient of multiple first-place engineering and entrepreneurial competition awards. Achievements include successfully developing machine learning models to efficiently discover cleaner, renewable, and economically-viable liquid fuels and fuel additives. Skilled in applied machine learning, data mining and processing, probability and statistics, and software engineering development and management.

TECHNICAL SKILLS

- Python, C/C++, MATLAB
- TensorFlow/Keras, PyTorch
- Scikit-learn, NumPy, Pandas
- Jupyter Notebook
- Ray/Dask
- Predictive/statistical modeling
- Clustering and classification
- Regression and transformers
- Data visualization
- Web scraping
- AWS, GCS, Azure
- SQL (Postgres, MySQL)
- NoSQL (MongoDB)
- Git/SVN
- Docker

EDUCATION

PhD, Computer Engineering
University of Massachusetts Lowell
May 2023

B.S., Computer Engineering
University of Massachusetts Lowell
May 2018

EXPERIENCE

Research Engineer

AIMdyn, Inc.

Oct. 2023 — Present

- Utilizes Koopman Operator Theory-based generative AI and other cutting-edge machine learning methods for the analysis, prediction, and control of complex dynamical systems
- Implements modular and scalable data processing, model training, and hyper-parameter tuning MLOps pipelines
- Administrates server cluster workflow/job manager, oversees software/application deployments, and manages network configurations

Graduate Research Assistant

University of Massachusetts Lowell Energy & Combustion Research Laboratory

Jan. 2019 — Sep. 2023

- Leveraged predictive models (deep learning, graph neural networks, etc.) to advance alternative fuel research
- Investigated methods for neural network feature selection and hyper-parameter tuning, including random forest trees, principal component analysis, artificial bee colonies, and various optimization algorithms
- Evaluated predictor/target variable relationships using a variety of statistical methods
- Managed a team of undergraduate computer science/engineering students to support research efforts
- Published research efforts in *The Proceedings of the Combustion Institute*, *The Journal of Open Source Software*, and the *American Society of Mechanical Engineers Internal Combustion Engine Fall Conference*

Implementation/DevOps Engineer

Valora Technologies

June 2018 — Jan. 2019

- Extracted text/numerical information from legal, financial, and government documents
- Constructed data pipelines to usher client documents from intake to delivery of data (ETL)
- Trained newly hired Implementation/DevOps engineers in data pipelining/mining workflow configuration

Undergraduate Research Assistant

June 2015 — May 2018

University of Massachusetts Lowell Energy & Combustion Research Laboratory

- Optimized predictive models to predict chemical properties based on molecular structure (QSAR/QSPR)
- Implemented optimal neural network architectures for multidimensional input and target data
- Developed open-source machine learning, feature extraction, and hyper-parameter tuning software packages
- Published research efforts in *Fuel*, *The Journal of Open Source Software*, and the *American Society of Mechanical Engineers Internal Combustion Engine Fall Conference*

SELECTED AWARDS & HONORS

Dean's Gold Medal for Outstanding Academic Achievement	May 2023
Computer Engineering Department Award for Outstanding Ph.D.	May 2023
Best Presentation, ASME ICEF 2019 Conference	Oct. 2019
1 st place, Symbotic Warehouse Robot Prototyping Competition	May 2018
Innovative Technology Solution, UMass Lowell DifferenceMaker 50K Idea Challenge	April 2017
1 st place, Francis College of Engineering Prototyping Competition	Dec. 2016
